Surlyn® Properties and Performance Overview

Key features:

Hot tack | Seal temperature | Formability | Clarity | Seal through contamination | Oil/grease resistance

What are Surlyn® resins?

Surlyn® packaging resins are made from ethylene acid copolymers, in which the acid groups are partially neutralized with either zinc or sodium ions. The acid in the polymer gives polarity and reduces crystallinity. The ionic bonding between the polymer chains gives outstanding melt strength, toughness, and clarity.

The combination of properties available in Surlyn® resins is unique among polymers, and especially well suited to packaging applications. The resins are available for use in conventional extrusion/coextrusion blown film, cast film, and extrusion coating equipment* designed to process polyethylene resins.

Benefits in Packaging Applications

The combination of outstanding properties of Surlyn® make it the cost-effective choice in a wide variety of packaging applications, including:

- Meat, seafood, poultry, and cheese packaging — the outstanding heat seal, hot tack, and seal through contamination properties of Surlyn® can dramatically reduce leakers both off-machine and in-store.
- Snack packaging — the low-temperature sealing and outstanding hot tack of Surlyn® allow rates on high-speed equipment to increase by as much as 300%.
- Skin packaging/stretch pak — the clarity, drawability, and toughness of Surlyn® make it a perfect choice for retail carded display packaging.
- Personal and health care packaging — outstanding sealing properties, toughness, and abrasion resistance allow packaging made with Surlyn® to give reliable, leak-free seals that ensure package integrity.
- Liquid packaging — seal through contamination and oil resistance give liquid packages made with Surlyn® a dramatic reduction in leakers.

Property Advantages of Surlyn®

Packaging Benefits

Hot tack — the highest hot tack strength and broadest hot tack range of any sealant

- higher packaging line speeds
- reduced seal failures and leakers

Sealing performance — low sealing temperatures and the widest sealing temperature range available

- faster sealing with less dwell time
- higher packaging line

- speeds
- tolerates temperature variations in real-world equipment

Formability — excellent formability/deep draw for evenly distributed film that resists pinholing

- fewer leakers due to cracks/pinholes in thin film areas

Clarity — crystal clear film

- gives packages a high-gloss, "premium" image

Seal through contamination — highly effective at sealing through all types of contamination

- fewer failures at the packaging machine
- reduced in-store leakers

Oil/grease resistance — excellent barrier for oily or greasy products

- fewer failures at the packaging machine
- reduced in-store leakers

Surlyn® Quality and Performance

Converters and end users are asking more from their packaging resins than ever before. Higher quality standards, downgauging pressures, and more demanding applications continuously challenge the performance of packaging resins: Surlyn® meets the challenge. With its outstanding combination of properties and production at DuPont ISO 9002-qualified manufacturing facilities, Surlyn® has the performance and quality needed in today's tough packaging environment.

Also, when you buy Surlyn®, you're supported by DuPont's sales assistance and technical service teams, unparalleled in the industry for knowledge and experience in the packaging area. We'll work with you before and after the sale to be sure the grade you buy is the best to suit your needs.

FDA Status

Surlyn® packaging resins are available that comply with U.S. FDA Regulations for use in food contact applications. For more information, contact your DuPont sales office or e-mail us at: packaging@dupont.com.

*EQUIPMENT NOTE: Materials of construction used in the processing of Surlyn® resins should be corrosion-resistant. Stainless steels and duplex chrome or nickel are recommended for surfaces in contact with the molten resins.

Because DuPont cannot anticipate or control the many different conditions under which this information and/or product may be used, it does not guarantee the applicability or the accuracy of this information or the suitability of its products in any given situation. Users of DuPont products should make their own tests to determine the suitability of each such product for their particular purposes. The data listed herein falls within the normal range of product properties but they should not be used to establish specification limits or used alone as the basis of design.
